JOSEFINA NORD
Fullstack developer

👤 Profile

As a person, I am driven and curious, with many years of experience in various roles. I studied computer science from 2018 to 2025, and I often work on personal projects and ideas in my spare time.

💼 Experience

2023 – 2025

HiQ Mälardalen, IT consultant
Frontend developer at **Hitachi Energy**

- Frontend development and UX design in Power Quality Applications for the next gen HMI solution in MicroSCADA X.

UX/UI Designer at **SAAB Aeronautics**

- Lead UX Designer with primary responsibilities including independently evaluating and improving UX & UI for new testing platforms.
- Design of iconography and logo.

2022 – 2023

Prevas AB, IT consultant
Software Developer at **Sandvik Coromant**

- Design and development of graphical user interfaces for robotic cells, as well as iconography design
- Development of a web service using .NET and SQL Server.

📖 Education

2020 – 2025

Mälardalen University

- Degree of Bachelor of Science in Engineering - Computer Network Engineering, 2025
- Higher Education Degree in Computer Science, 2022

2023 – 2024

Linköping University

- The basics of AI
- Cyber security

2023 – 2023

Luleå University of Technology

- Web development
- Graphical user interfaces

2018 – 2020

The University of Halmstad

- Computer Science & Electrical Engineering
- Project management & project work

Full list of grades and education is available per request.

Programming languages

CSS, JavaScript, TypeScript, HTML/XML, PHP, Python, React.js, C#, SQL.

Tools

Azure DevOps, Adobe suite, Figma, Microsoft Office, Visual Studio Code, .NET, Git, GitHub, version control, API.

Methods

Agile, Scrum, SAFe, Kanban, Lean & Six Sigma, User-Centered Design, Accessibility & WCAG, User testing, Usability testing, Microservices, Clean Code.

📝 Letter of application

Hello,

My name is Josefina Nord, and I have broad experience in frontend and backend development, UX/UI design, and software development. By combining technical expertise with creative problem-solving, I have delivered intuitive and user-friendly solutions that support business goals and enhance the user experience.

My education at Mälardalen University has provided me with solid knowledge in system design and data communication, with a focus on user-centered solutions. My thesis on integrating Time-Sensitive Networking (TSN) with 5G for autonomous vehicles has given me practical experience in developing interfaces and working with complex technical systems in a real environment.

In my previous roles, including working with Hitachi Energy, Saab Aeronautics, and Sandvik Coromant, I have led projects that required close collaboration with developers, product owners, and other stakeholders. I have designed and developed user interfaces for complex systems, such as test systems and HMI, as well as optimized databases, and developed services in the .NET environment. These experiences have strengthened my understanding of agile methodologies and principles such as Clean Code, which ensure sustainable and efficient results.

I am particularly passionate about working at the intersection of technology and user experience and look forward to the opportunity to contribute innovative solutions that meet your needs.

I look forward to a conversation where we can discuss how my experiences and interests align with your projects and long-term goals.

Best regards, Josefina Nord

Josefina Nord
